Executive Message

Procurement plays a vital role in South Africa's economic development. Every day, procurement professionals across government, municipalities, state-owned enterprises and private organisations make decisions that influence service delivery, infrastructure development, supplier growth and economic participation.

The BidPro Procurement Intelligence Research Programme 2026 was established to better understand these realities through independent research and collaboration with procurement professionals and organisations across South Africa.

Every organisation participating in this research contributes to building a more informed understanding of procurement in South Africa.

About BidPro

BidPro is a South African procurement technology platform established to support the transformation of procurement through intelligent technology, research and innovation.

Our mission is to improve how organisations discover opportunities, manage procurement information and make informed procurement decisions by combining modern technology with practical industry knowledge.

Vision: To become Africa's leading procurement intelligence platform, empowering organisations through trusted technology, meaningful research and practical innovation.

Mission: To transform procurement by providing intelligent technology solutions and research that improve transparency, collaboration and decision-making.

The Procurement Landscape

Procurement is no longer viewed solely as an administrative function. It has become a strategic discipline that influences organisational performance, governance, supplier development and economic growth.

Across South Africa, procurement teams are increasingly expected to manage regulatory requirements, support digital transformation and improve operational efficiency while maintaining transparency and accountability.

Technology continues to reshape procurement through automation, analytics, digital workflows and artificial intelligence. Adoption levels, organisational readiness and practical implementation, however, vary across sectors.

About the Research Programme

The BidPro Procurement Intelligence Research Programme 2026 is an independent national initiative established to develop a deeper understanding of procurement practices, digital transformation and technology adoption across South Africa.

The programme collects practical insights from organisations involved in procurement and supply chain management. It focuses on the procurement ecosystem as a whole rather than evaluating individual organisations.

Research Objectives

- Understand current procurement practices across sectors.
- Measure digital transformation and procurement technology adoption.
- Identify operational, organisational and technology-related challenges.
- Explore awareness and expectations regarding automation, analytics and artificial intelligence.
- Promote collaboration between government, industry, academia and technology providers.
- Inform future procurement innovation.

Research Scope

- Procurement governance and processes.
- Supplier engagement and participation.
- Digital transformation and procurement technology.
- Artificial intelligence awareness and future priorities.
- Data, reporting, operational challenges and innovation opportunities.

Who Should Participate

- National and provincial government departments.
- Municipalities, state-owned enterprises and public entities.
- Universities, TVET colleges and healthcare institutions.
- Private companies, small and medium enterprises and suppliers.
- Procurement professionals, supply chain practitioners, technology providers, consultants and industry associations.

Research Methodology

The programme uses a cross-sectional descriptive research design and a mixed-method questionnaire containing structured questions, rating scales and short written responses.

Information is collected through an online questionnaire. Responses are analysed collectively using descriptive statistics and thematic analysis where appropriate.

The findings are intended to provide aggregated national insights and support industry discussion. They are not intended to rank or publicly benchmark individual organisations.

Confidentiality and Research Ethics

- Participation is voluntary.
- Individual organisations and respondents will not be publicly identified without permission.
- Findings will be reported in aggregated form.
- Information will be used solely for research and publication purposes.
- The programme is guided by transparency, confidentiality, responsible data handling, integrity and respect for participants.

Expected Outcomes and Publications

- A clearer understanding of procurement practices across sectors.
- Evidence-based identification of procurement challenges.
- Insights into digital transformation and technology adoption.
- Recognition of opportunities for innovation.
- Publication of the 2026 South African Procurement Technology Insights Report.

Research Timeline

- Programme launch: July 2026.
- National survey: July-August 2026.
- Data analysis: August 2026.
- Validation: September 2026.
- Publication: September 2026.

Why Participate

- Contribute to nationally relevant procurement research.
- Help identify real procurement challenges and innovation opportunities.
- Support evidence-based discussion on digital transformation.
- Influence future procurement technology priorities.
- Strengthen the diversity and quality of the research findings.

Participate

Visit the official Research Programme page and select 'Participate in the Research' to access the online questionnaire.
