Executive Overview

The BidPro Procurement Intelligence Research Programme 2026 is an independent national research initiative established to better understand procurement practices, digital transformation and technology adoption across South Africa.

The programme brings together procurement professionals, government institutions, municipalities, state-owned enterprises, educational institutions, suppliers and private organisations to contribute evidence-based insights into the future of procurement.

The findings will support the development of the 2026 South African Procurement Technology Insights Report, providing a consolidated view of procurement trends, operational challenges and emerging opportunities that can inform future procurement innovation.

Participation is voluntary, confidential and takes approximately 8-10 minutes.

Why This Research Matters

Procurement is becoming increasingly technology-driven. Organisations are adopting digital platforms, automation, analytics and artificial intelligence to improve transparency, efficiency and decision-making. However, there remains limited publicly available research focused specifically on procurement technology adoption and digital procurement maturity within South Africa.

This programme seeks to address that gap by collecting practical insights from organisations directly involved in procurement and supply chain management.

Research Objectives

- Understand procurement practices across sectors.
- Measure digital transformation within procurement.
- Identify procurement challenges and opportunities.
- Explore procurement technology adoption.
- Capture industry perspectives on innovation.
- Produce evidence-based national procurement insights.

Who Should Participate?

- Government departments and municipalities.
- State-owned enterprises and public entities.
- Universities, TVET colleges and healthcare institutions.
- Private organisations and small and medium enterprises.
- Procurement and supply chain management professionals.
- Suppliers, consultants and technology providers.

Research at a Glance

Research focus	Procurement practices, digital transformation and technology adoption
Survey duration	Approximately 8-10 minutes
Participation	Voluntary
Confidentiality	Responses analysed and reported in aggregated form
Primary output	2026 South African Procurement Technology Insights Report
Geographic scope	South Africa

Confidentiality Commitment

Protecting participant information is fundamental to the integrity of the research programme.

- Participation is entirely voluntary.
- Individual organisations will not be publicly identified without permission.
- Findings will be presented in aggregated form.
- Information will be used solely for research and publication purposes.
- Data will be handled responsibly throughout the research process.

Expected Research Output

The programme will contribute to the 2026 South African Procurement Technology Insights Report. The report is expected to present procurement technology adoption trends, digital transformation insights, common operational challenges, innovation opportunities and a future outlook for procurement technology in South Africa.

Research Timeline

Programme launch	July 2026
National survey	July-August 2026
Data analysis	August 2026
Validation	September 2026
Publication	September 2026

Learn More and Participate

Your contribution will help strengthen understanding of procurement practices and support future procurement innovation across South Africa.
